Multiple choice

1. **What is a key component of an ERP system's hardware?**
   a) Operating System
   b) Database Management System
   c) High-end multiprocessor servers
   d) Virus protection software

2. **What is the primary role of middleware in ERP implementations?**
   a) To replace the ERP system
   b) To develop reporting databases using extract, translate, and load tools
   c) To act as the main server hardware
   d) To train end-users

3. **Which of the following is a reason to choose a Vanilla ERP implementation?**
   a) The company has highly unique business processes
   b) The company lacks skilled IT developers
   c) The company wants extensive customization
   d) The company prefers to modify the ERP system

4. **What is a critical platform issue for ERP implementations?**
   a) Employee vacation schedules
   b) Network reliability and security
   c) Office decor preferences
   d) Marketing campaign designs

5. **Who oversees the project's efforts and ensures appropriate leadership in an ERP implementation?**
   a) End-users
   b) Steering Committee
   c) Vendors
   d) Database Administrators

6. **What is the first step in the ERP vendor selection process?**
   a) Request for Proposal (RFP)
   b) Vendor research and information gathering
   c) Contract negotiation
   d) Functional evaluation

7. **Why is involving end-users in the vendor selection process important?**
   a) To reduce costs
   b) To help with change management and gain trust
   c) To speed up the implementation
   d) To eliminate the need for consultants

8. **Which of the following is NOT a factor to consider when selecting a vendor?**
   a) Vendor's financial position

b) Vendor's office location
c) Vendor's implementation philosophy
d) Vendor's software upgrade strategies

9. **What is the purpose of a Request for Bid (RFB) or Request for Proposal (RFP)?**
a) To finalize the contract
b) To gather detailed information from vendors about their solutions
c) To train employees
d) To install the ERP system

10. **Which document is often a result of identifying user and system requirements?**
a) Vendor's financial report
b) Data and functional flow of departmental processes
c) Employee training manual
d) Contract agreement

11. **What should be included in an RFB/RFP?**
a) Vendor's marketing strategy
b) Specific functionality, hardware/software infrastructure, and training requirements
c) Employee salaries
d) Company's annual revenue

12. **Who is responsible for evaluating the technology requirements during vendor analysis?**
a) Office staff
b) IT staff
c) Contract staff
d) Marketing team

13. **What is Total Cost of Ownership (TCO)?**
a) The initial purchase price of the software
b) The cost of training employees
c) The overall cost of acquiring, implementing, and maintaining the ERP system
d) The cost of hardware only

14. **Which of the following is a key component of an ERP contract?**
a) Employee vacation policies
b) Clearly identified deliverables with delivery dates
c) Vendor's office location
d) Company's marketing plan

15. **Why is negotiating with two vendors beneficial?**
a) It speeds up the implementation process
b) It yields a better purchase price
c) It eliminates the need for a contract
d) It reduces training requirements

16. **Which ERP vendor is known for solutions tailored to mid-market companies?**
    a) SAP
    b) Oracle/PeopleSoft
    c) Epicor
    d) Microsoft Great Plains

17. **What is the role of management in the ERP selection process?**
    a) To avoid involvement in the process
    b) To choose the right system that meets the company's needs
    c) To handle all technical evaluations
    d) To train end-users

18. **What is the purpose of documenting business processes before selecting an ERP system?**
    a) To create a marketing plan
    b) To match requirements to system functionality
    c) To reduce the number of vendors
    d) To eliminate the need for IT staff

19. **Which of the following is NOT a step in the high-level ERP purchase process?**
    a) Vendor research
    b) Employee recruitment
    c) Needs and requirements assessment
    d) Contract review and change

20. **What should be communicated during the contract management phase?**
    a) Employee personal details
    b) Progress and changes to the contract
    c) Vendor's financial reports
    d) Company's competitors

True or False

21. The first step in the ERP vendor selection process is sending out a Request for Proposal (RFP). False
22. Involving end-users in the vendor selection process helps with change management. True
23. Total Cost of Ownership (TCO) only includes the initial purchase price of the ERP software. False
24. Negotiating with multiple vendors can lead to a better purchase price. True
25. An ERP contract should avoid specifying deliverables and deadlines to allow flexibility. Flase
26. A Vanilla ERP implementation involves heavy customization of the system. False
27. Third-party products are sometimes needed to add missing functionality to an ERP system. True
28. Disaster recovery planning is optional in ERP implementations. False
29. The Project Management Office (PMO) manages day-to-day aspects of the ERP project. True
30. Modifying an ERP system has no impact on future upgrades. False

Assignment 6
Multiple Choice Questions

31. What is the primary purpose of the Go-Live Readiness Review?
    a) To celebrate the completion of the ERP project
    b) To ensure all necessary steps are completed before Go-Live
    c) To replace the need for training
    d) To reduce the project budget

32. How long does the stabilization phase typically last after Go-Live?
    a) 10-20 days
    b) 30-45 days
    c) 60-90 days
    d) 120-150 days

33. What is a key risk during the stabilization phase?
    a) Lack of coffee in the office
    b) Customizations that are not well-documented
    c) Too many team meetings
    d) Overstaffing the IT department

34. Who should be involved in the readiness review process?
    a) Only senior management
    b) Only IT staff
    c) As many team members, users, and managers as possible
    d) External consultants only

35. What is the purpose of postproduction support?
    a) To develop new ERP features
    b) To ensure the system operates as intended daily
    c) To replace the stabilization phase
    d) To reduce the number of employees

36. Why is training with real data important?
    a) It makes the training sessions longer
    b) It helps users understand what they will encounter daily
    c) It is required by law
    d) It reduces the need for Go-Live

37. What is a common issue in parallel implementations?
    a) The system is too fast
    b) Running old and new systems simultaneously is labor-intensive
    c) Users refuse to attend training
    d) The ERP system is never used

38. What does a knowledge management plan help achieve?
    a) Increases support costs

b) Ensures knowledge is retained and reduces support calls
c) Delays the Go-Live date
d) Replaces the need for consultants

39. What should be monitored during stabilization?
a) Office decor
b) Infrastructure response times and backups
c) Employee vacation schedules
d) Company stock price

40. What is critical for long-term ERP success?
a) Ignoring user feedback
b) A well-defined knowledge transfer process
c) Reducing the number of training sessions
d) Delaying Go-Live indefinitely

True or False Questions

41. The Go-Live Readiness Review is optional for ERP implementations. False
42. Training should use real data to prepare users for daily tasks. True
43. The stabilization phase begins before the ERP system goes live. False
44. Postproduction support ensures the system operates as intended. True
45. Only IT staff need to be trained on the new ERP system. False
46. Parallel implementations are the **least** labor-intensive approach. False
47. A knowledge management plan helps retain critical system knowledge. True
48. The stabilization phase lasts for 30 days or less. False
49. Senior management endorsement is unnecessary for training success. False
50. Having one centralized data repository can help avoid confusion, duplication, and data loss. True

Assignment 7

51. What is the definition of "risk" in the context of Enterprise Risk Management (ERM)?
a) A guaranteed negative outcome
b) The possibility of suffering harm, loss, or danger
c) A fully predictable event with no uncertainty

52. What is the definition of "risk" in the context of Enterprise Risk Management (ERM)?
a) A guaranteed negative outcome
b) The possibility of suffering harm, loss, or danger
c) A fully predictable event with no uncertainty
d) An event that always leads to financial gain

53. Which of the following best describes an "opportunity" in ERM?
a) An event that only has negative impacts
b) The possibility that an event will positively affect objectives
c) A threat that cannot be mitigated

54. What are the two main components of "uncertainties" in ERM?

a) Profits and losses
b) Threats and opportunities
c) Costs and benefits

55. What are the two main components of "uncertainties" in Enterprise Risk Management (ERM)?
a) Profits and losses
b) Threats and opportunities
c) Costs and benefits
d) Strengths and weaknesses

56. Which of the following is NOT one of the four categories of the ERM framework?
a) Strategic
b) Operational
c) Marketing

57. What type of risk includes damage to reputation and competition?
a) Operational Risk
b) Strategic Risk
c) Financial/Reporting Risk

58. Which of the following is an example of an Operational Risk?
a) Foreign exchange fluctuations
b) Supply chain management
c) Regulatory fines

59. What does Financial/Reporting Risk primarily concern?
a) Natural disasters
b) Reliability of financial reporting
c) Employee turnover

60. Which of the following is a Hazard/Compliance Risk?
a) Technological innovation
b) Theft and property damage
c) Customer demand shifts

61. What is the first step in the ERM process?
a) Risk Assessment
b) Risk Identification
c) Risk Monitoring

62. Which step in the ERM process involves "avoiding, reducing, sharing, or accepting risks"?
a) Risk Response
b) Risk Review
c) Risk Reporting

63. How do opportunities support an organization?

a) By eroding existing value
b) By preventing value creation
c) By supporting value creation or preservation
d) By increasing risks

64. How can events with positive impacts affect an organization**?**
a) They only create new risks
b) They may offset negative impacts or represent opportunities
c) They always lead to financial losses
d) They have no significant effect

65. What is the primary difference between program management and project management?
a) Program management is tactically focused, while project management is strategically focused.
b) Program management is strategically focused, while project management is tactically focused.
c) Both are identical in scope and focus.
d) Program management deals only with financial risks.

66. What is a key responsibility of the Project Management Office (PMO) during an ERP implementation?
a) Eliminating all risks before the project starts.
b) Ensuring project teams work together and address issues efficiently.
c) Handling only technical aspects of the ERP system.
d) Delegating all decisions to external consultants.

67. Which of the following is a critical success factor for ERP implementation?
a) Avoiding all changes to project scope.
b) Senior management commitment and clear communication.
c) Exclusively using internal IT staff without external consultants.
d) Ignoring resistance to change among staff.

68. What is the purpose of Business Process Re-engineering (BPR)?
a) To maintain existing processes without changes.
b) To dismantle and redesign processes for efficiency and alignment with ERP best practices.
c) To focus solely on automating manual tasks.
d) To reduce the need for senior management involvement.

69. Why is change management important in ERP implementations?
a) To eliminate all employee resistance.
b) To maximize benefits and minimize failure risks by addressing human and process impacts.
c) To delay the project timeline for additional testing.
d) To focus only on technical system configurations**.**

Assignment 8
70. **What does identifying users primarily provide input for?**
A) Budget allocation
B) Security policies

C) Roles and data relationships
D) Software licenses

71. **When defining applications, which factor is important to consider?**
A) The developer's nationality
B) The system where the application is installed
C) The color of the application icon
D) The application's marketing strategy

72. **Why should enterprises define all applications and their purpose?**
A) To know which data they access
B) To calculate electricity consumption
C) To train new employees faster
D) To reduce software update frequency

73. **What is the benefit of knowing where applications are installed?**
A) Helps design user-friendly interfaces
B) Determines the scope of risks with application access
C) Makes installation faster
D) Reduces application cost

Tutorial 1
Select the correct answer for the following.
1. What is the primary goal of an ERP system?
a) To replace all human employees with automation
b) To integrate data and support major organizational functions
c) To reduce internet usage in companies
d) To create standalone departmental software

2. What is a critical challenge during ERP implementation?
a) Employees refusing to use Microsoft Office
b) Retraining staff and managing resistance to change
c) Increasing the number of information silos
d) Reducing internet speed

3. Which vendor is the global leader in ERP solutions?
a) Microsoft Dynamics
b) Oracle/PeopleSoft
c) SAP
d) Infor

4. What problem do functional silos create in organizations?
a) Improved real-time information sharing
b) Bottlenecks and inefficient information flow
c) Reduced need for management
d) Faster decision-making at all levels

5. Which of the following is a key role of ERP systems in systems integration?
a) Encouraging departmental isolation
b) Standardizing and improving business processes
c) Increasing paperwork and manual processes
d) Reducing the need for IT infrastructure

(II) True or False Questions.

1. ERP systems are identical to conventional packaged software like Microsoft Office. False
2. SAP primarily targets only small businesses. False
3. Change management is unimportant during ERP implementation. False
4. Systems integration only involves technical changes, not human or process adjustments. False
5. Web-based systems use centralized architecture exclusively. True

Midterm
Multiple Choice
1.What is a key risk during the stabilization phase?
a) Lack of coffee in the office
b) Customizations that are not well-documented
c) Too many team meetings
d) Overstaffing the IT department

2.What is the purpose of postproduction support?
a) To develop new ERP features
b) To ensure the system operates as intended daily
c) To replace the stabilization phase
d) To reduce the number of employees

3.Why is training with real data important?
a) It makes the training sessions longer
b) It helps users understand what they will encounter daily
c) It is required by law
d) It reduces the need for Go-Live

4.What is a critical platform issue for ERP implementations?
a) Employee vacation schedules
b) Network reliability and security
c) Office decor preferences
d) Marketing campaign designs

5.Who oversees the project's efforts and ensures appropriate leadership in an ERP implementation?
a) End-users
b) Steering Committee
c) Vendors
d) Database Administrators

6.Which of the following is NOT a factor to consider when selecting a vendor?
a) Vendor's financial position
b) Vendor's office location
c) Vendor's implementation philosophy
d) Vendor's software upgrade strategies

7. Which of the following is a key component of an ERP contract?
a) Employee vacation policies
b) Clearly identified deliverables with delivery dates
c) Vendor's office location
d) Company's marketing plan

8. What is a common issue in parallel implementations?
a) The system is too fast
b) Running old and new systems simultaneously is labor-intensive
c) Users refuse to attend training
d) The ERP system is never used

9. What is critical for long-term ERP success?
a) Ignoring user feedback
b) A well-defined knowledge transfer process
c) Reducing the number of training sessions
d) Delaying Go-Live indefinitely

10. What should be monitored during stabilization?
a) Office decor
b) Infrastructure response times and backups
c) Employee vacation schedules
d) Company stock price

True or False
1.The first step in the ERP vendor selection process is sending out a Request for Proposal (RFP). False
2.Total Cost of Ownership (TCO) only includes the initial purchase price of the ERP software. False
3.Training should use real data to prepare users for daily tasks. True
4.The Project Management Office (PMO) manages day-to-day aspects of the ERP project. True
5.A knowledge management plan helps retain critical system knowledge. True

Tuto 3
1.Which of the following is NOT one of the four main entries in the risk register during the risk identification process?
A) Lists of identified risks
B) List of potential responses
C) Root causes of risk

D) Project scope statement
E) Updated risk categories

2. What does *mitigating a risk* primarily aim to do?
A) Increase the probability of risk occurrence
B) Reduce the impact and/or probability of the risk
C) Completely eliminate all risks
D) Ignore the risk to save costs
E) Transfer the risk to another party

3. Which of the following best describes the role of *risk culture* within a company?
A) It determines how employees behave in dealing with risks.
B) It eliminates all risks faced by the company.
C) It ensures that only executives are responsible for risks.
D) It focuses solely on financial risk management.
E) It replaces the need for open communication.

4. Why should data in an enterprise be assigned a classification according to policy?
A) To ensure each department can value data subjectively
B) To dictate the required security for the identified data
C) To eliminate the need for enterprise-wide data management
D) To reduce the amount of data stored in the enterprise
E) To make data visible only to executives

5. What is the main difference between a *policy* and a *standard* in enterprise security?
A) A policy explains how security tasks should be implemented, while a standard states why they are important.
B) A policy dictates what must be done, while a standard defines how it should be done.
C) A policy is optional, while a standard is mandatory.
D) A policy applies only to executives, while a standard applies to employees.
E) A policy sets encryption algorithms, while a standard decides who manages them.
